Kimball, MN 55353

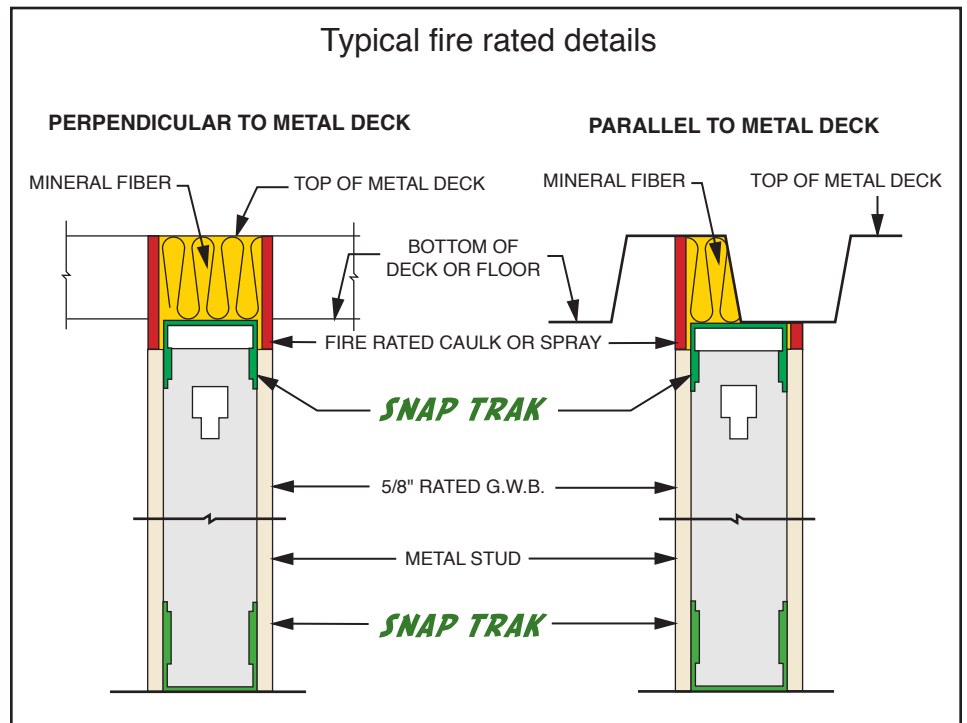

Snap Trak is a specially designed track that has clips punched into its sides spaced 8" o.c. These clips engage the inside flange of a steel stud when the stud is snapped into them. This allows for a positive attachment to the steel stud without the need for screws. Snap Trak can also be used as a floor runner

Snap Trak can be used as a ceiling track in fire rated and non-fire rated head-of-wall joints. The punched out clip is spaced 1" from the top of the track, providing you with 1" of deflection in a non-rated assembly. In a fire rated assembly, just like every other deflection system available irregardless of their claims, the deflection is based on the type of fire caulk or fire spray that is used.

Snap Trak runners are fabricated from 24, 20 and 16 gauge galvanized steel.

Snap Trak runners come in 10' lengths and are available for the following stud sizes: 1-5/8", 2-1/2", 3-1/2", 3-5/8", 4", 6" and 8".

Snap Trak is listed as an alternate framing member for the following UL Head-of-wall listings by test sponsor.
